

What each verdict means

SUPPORTED

Definition:

LLM claim matches evidence in RaMP / KEGG / HMDB / SIRIUS

Interpretation:

Higher = LLM in agreement with verifier evidence sources

UNSUPPORTED

Definition:

Evidence DB has no record matching the claim — could be missing or wrong

Interpretation:

Conservative: doesn't say wrong, just no positive evidence

CONTRADICTED

Definition:

Evidence DB returns OPPOSING information (e.g. compound is in different pathway)

Interpretation:

Higher = more LLM hallucinations caught by verifier

UNVERIFIABLE

Definition:

Claim is out of v0 verifier scope (free-text biology, mechanism, etc.)

Interpretation:

Higher = LLM writes more functional / mechanistic narrative; verifier limitation
