

Fig. 3 (v2, refined). Panel A: PA-method disagreement (mean off-diagonal Jaccard 0.046, N=22 tasks) motivates ConcordMet reconciliation. Panel B: cross-source InChIKey disagreement (compound-level metric, n=110) reduces 59.1% → 5.5% by RDKit Uncharger + safeguarded tautomer canonicalization (25 compounds had tautomer step rejected by safeguards). Reconciled is an upper-bound estimate (only HMDB SMILES canonicalized; per-source canonicalization is W5 follow-up).
